EDUCATION

École de technologie supérieure (ÉTS)

Expected Graduation: 05/2028

Bachelor of Engineering in Software Engineering

Montreal, QC

- **Relevant Coursework:** Relevant Coursework: Algorithms, Data Structures, Distributed Systems, Computer Architecture, Operating Systems, Database Systems, Software Engineering

TECHNICAL SKILLS

Languages: Java, Python, C/C++, TypeScript, JavaScript, SQL, PHP, C#

Frameworks: React, Node.js, Express, FastAPI, Vue.js, .NET, GraphQL, Tailwind CSS

Data and Cloud: PostgreSQL, Azure Databricks, PySpark, AWS, Snowflake, Delta Lake, Power BI

Tools and Platforms: Git, Docker, Linux, Google Calendar API, Chrome Extension APIs, WebSockets, WebRTC

EXPERIENCE

Ubisoft

Jan. 2026 – Present

Data Application Specialist Intern

Montreal, QC

- Built distributed ETL pipelines using **Python and PySpark** to process **100K+ Jira records** and analyze datasets containing **1M+ rows** in Azure Databricks.
- Designed automated data transformation workflows powering **5+ operational dashboards** used to monitor SLA compliance and engineering performance.
- Developed and deployed a **LimeSurvey plugin ecosystem** using **PHP, JavaScript, MySQL, and Docker** to support the migration from **Qualtrics**, delivering **10+ core capabilities** and serving **100+ internal users**.

Civalgo

Jan. 2025 – May 2025

Software Developer Intern

Montreal, QC

- Developed **10+ full-stack features** using React, TypeScript, Node.js, GraphQL, and PostgreSQL for a construction management platform serving **200+ active users**.
- Improved interface responsiveness by **20%** through client-side caching, optimistic updates, and more efficient application state management.
- Built a structured rich-text editor with TipTap and ProseMirror, supporting comments, formatting, and content creation for **300+ users**.

Primaco

Mar. 2023 – Aug. 2024

Software Developer

Montreal, QC

- Reduced support resolution time by **50%** by developing a real-time screen-sharing system with WebRTC and WebSockets, supporting **50+ monthly sessions**.
- Integrated and maintained the **Moneris payment API**, enabling secure processing of **100+ monthly insurance transactions**.
- Modernized **20+ legacy PHP components** by migrating interfaces to Vue.js and Tailwind CSS, reducing UI inconsistencies and improving maintainability.

PROJECTS

FiveNines | [Live Demo](#) | [Source Code](#)

TypeScript, Supabase, PostgreSQL, React Flow

- Built and deployed a full-stack system design canvas that lets users create private architecture projects, start from industry templates, and edit service diagrams with draggable components and connections.
- Implemented Supabase authentication, protected user data with Row Level Security, and added project quotas, dashboard usage metrics, password reset, theme preferences, and persistent saved diagrams.

SemesterSync | [Source Code](#)

Python, FastAPI, React, Google Calendar API

- Developing a full-stack academic planning platform that extracts assessments, deadlines, and class schedules from uploaded syllabus PDFs and synchronizes verified events with Google Calendar.
- Designed an OpenAI-powered extraction pipeline that converts unstructured course information into validated calendar events while normalizing dates and preventing duplicate entries.

QuickData Chrome Extension | [Source Code](#)

TypeScript, Chrome APIs, Manifest V3

- Developing a Chrome extension that generates and injects structured test data into web forms, reducing repetitive input during local development and application testing.
- Built reusable TypeScript modules for form-field detection, configurable data generation, and browser-side input injection using Chrome Manifest V3 APIs.
